

## Oral testimony from Mr. Kibhonge (Rice farmer)

Mr. Kibhonge does not write. However, we were able to record a conversation with him (in KiSwahili) in August 2015 which he talked about the benefits of Safi Sarvi on his farm. A footage of this interview video is shown in our YouTube channel; an English translation of his testimony from KiSwahili is included below:

*“The length of rice panicles was 6 inches, but since I changed [to Safi Sarvi soil conditioner], it is now 9 inches long. So we can see a difference of 3 inches. If there is acidity [in the soil], we see that it goes away. After harvesting, the kilograms harvested are more than what we were harvesting before. That is the difference I have seen. Also this organic product [Safi Sarvi] is very good, because when the soil is compact, if you add it, it allows the roots to penetrate. That is what I love the most, and that is where I saw a lot of difference.”*
